

**WELCOME
To**

Pulse World

**The One-Stop Solution The Best Digital
Asset Investment.**

www.pulsescripto.com

What is Pulse..?

- **Pulse World is a social network that uses the metaverse to provide users with virtual communities, games, music, videos, and other social activities. It connects users, creators and brands using block chain technology, decentralized identity, and smart contracts, creating a shared economic model.**
- **Additionally, Pulse World will provide a range of services and solutions for content creators, users and brands, such as content creation and distribution tools, as well as marketing and advertising solutions to help brands engage with their prospective audiences.**
- **Pulse Chain is a fast, open-source, public block chain and a cost-effective hard fork of the Ethereum. It is the first hard fork to contain the complete state of the Ethereum block chain, meaning that it holds records of every transaction, user account, and smart contract interaction on Ethereum. While the rollout of Ethereum 2.0 reaches its final stages, the programmable block chain space is becoming home to several Ethereum competitors.**
- **PulseChain aims to solve the issues around Ethereum's scalability by providing a low-cost alternative to the number-one smart contract block chain network. Ethereum gas fees can spike dramatically during periods of network congestion. When this occurs, transactions take longer to finalize, and the entire network slows down.**

What is PulseChain Bridge and How Does It Work?

- PulseChain Bridge is a fast, open-source, public blockchain and a cost-effective hard fork of the Ethereum. It is the first hard fork to contain the complete state of the Ethereum blockchain, meaning that it holds records of every transaction, user account, and smart contract interaction on Ethereum. While the rollout of Ethereum 2.0 reaches its final stages, the programmable blockchain space is becoming home to several Ethereum competitors.
- PulseChain Bridge aims to solve the issues around Ethereum's scalability by providing a low-cost alternative to the number-one smart contract blockchain network. Ethereum gas fees can spike dramatically during periods of network congestion. When this occurs, transactions take longer to finalize, and the entire network slows down.
- Furthermore, PulseChain Bridge uses a fork of the Binance Smart Chain (BSC) Proof-of-Stake consensus mechanism, Parlia. However, the project has since moved toward a new Proof of Staked Authority (PoSA) consensus mechanism, which introduces native validator staking, rotation, and reward-slashing contracts.
- PoSA combines Proof-of-Stake (PoS) and Proof-of-Authority (PoA) to offer a next-generation hybrid consensus model that overcomes many of the inefficiencies of legacy consensus mechanisms.

Interoperability Between Pulse Chain Bridge And Ethereum..?

- **The PulseChain Bridge network is fully-interoperable with Ethereum. Anyone can buy and sell ETH and Ethereum tokens on PulseChain Bridge. Plus, PLS is available as an ERC-20 token. Also, the interoperable Pulse Bridge allows users to bridge assets between multiple blockchain networks. PulseBridge works by allowing users to lock assets in a smart contract and issue assets like pETH at a 1:1 ratio.**
- **Interoperability is an essential component of the Web3 landscape. In the past, blockchain networks and their communities have been segregated. However, interoperability allows blockchain development communities to collaborate and expedite innovation. Moreover, interoperability helps decentralized finance (DeFi) protocols access better liquidity and provide a better user experience for the users of all kinds of Web3 protocols.**

What Does Pulse Chain Bridge Aim to Achieve?

- **Pulse Chain Bridge aims to increase the value of the Ethereum network by sharing some of the network load and lowering gas fees. Also, the project aims to enrich existing Ethereum users and ETH holders by rewarding them with PLS token via the highly-anticipated Pulse Chain Bridge airdrop.**
- **Moreover, Pulse Chain Bridge aims to lower the barrier to entry for Web3 by allowing users to transact for free using the “freemium” PLS token system. In addition, Pulse Chain Bridge seeks to improve on the game theoretic dynamics of existing block chain networks using a 0% inflation model for PLS token.**
- **Moreover, because PulseChain Bridge is a full-state Ethereum fork, it doesn't start life as an empty block chain. All token balances and smart contract data will be ready to go on the new Ethereum fork as soon as it launches.**

What is PLS token ..?

- **The PLS token is the native utility token of the Pulse Chain Bridge network. It uses the PRC-20 token standard, a variation of Ethereum's ERC-20 standard, and is essential for paying transaction fees throughout the network. Also, PLS holders can delegate their tokens to validators. By doing this, token holders help to secure the network.**
- **Network validators can decide how they split transaction fee revenue with delegators. PLS token holders can decide to stake with validators offering higher rewards with lower authority scores or opt for the most authoritative validators and earn less. Pulse Chain Bridge validators receive 75% of all PLS tokens generated by transaction fees. The remaining 25% is burned, lowering the circulating supply.**
- **Furthermore, the PLS token will become available through various distribution mechanisms. Upon forking, the supply of PLS tokens will be significantly inflated to compensate those who participated in the sacrifice phase. However, the token-burning mechanism aims to bring the supply back to equilibrium as the project matures.**

PulseChain Bridge Airdrop: Largest Airdrop in History..?

- **An airdrop is when a blockchain or crypto project distributes free coins or tokens to its community. Airdrops are often seen as a marketing tool that allows new projects to give away free tokens to boost interest and engagement.**
- **The PulseChain airdrop is supposed to be the “largest airdrop in history” and will see free PLS-20 balances airdropped to reflect thousands of ERC-20 token balances. PulseChain Bridge holds a full-state copy of all Ethereum token balances. This allows the upcoming PulseChain Bridge airdrop to distribute PLS variations of various Ethereum tokens and NFTs.**
- **The PulseChain Bridge airdrop will begin upon the launch of the PulseChain Bridge blockchain. Anyone with an Ethereum token balance in a non-custodial wallet will receive a 1:1 PLS token balance with no action required, giving users access to all their Ethereum tokens on PulseChain Bridge.**
- **Any ETH held in a non-custodial wallet will be replaced with a PLS balance. However, all ERC-20 tokens will retain their original names.**

PulseX: DeFi Token of PulseChain Bridge..?

- **PulseX is PulseChain Bridge's flagship DeFi token swap platform. It will provide network participants with access to Defi features like AMMs, liquidity pools, and yield farming. PulseX is headed by Richard Heart, an entrepreneur, and founder of the HEX cryptocurrency project.**
- **Pulse Chain Bridge's sacrifice period raised funds that will partly contribute to the development and launch of PulseX. Investors who sacrificed tokens will receive an allocation of PLSX tokens, the native utility token of the PulseX platform.**
- **PulseX is a cone of Uniswap, the leading DEX on Ethereum. However, it promises faster transactions and lower fees. Nonetheless, it is yet to be seen how well the PluseX DEX will perform and if it will garner the same interest from DeFI users as Uniswap.**
- **Moreover, the supply of PLSX tokens is informed by the value of tokens sacrificed by investors during the sacrifice period.**

Benefits of Pulse Chain Bridge networks

- **Lower Gas Fee Compared To Ethereum Network**
- **Faster Transaction Time, It Will Be Less Than 4 Seconds Compared To Ethereum Of 13 Seconds**
- **Enriching Ethereum Users The Snapshot, That Copying The Entire Entereum And Giving Them A Copy Of Their Eth**
- **Enrich ERC20 And NFT Users**
- **Replacing Prove Of Work With Proof Of Stake, Is A Game-changer In Crypto Ecosystem**
- **Empower And Enrich PulseChain Bridge Users, That Is, Sacrificers Of PulseChain Bridge Have Pulse Points That Will Be Converted To Pulse Coin [PLS], With Huge Price Expectation, Pulse Holder Will Be Rich.**
- **Disclaimer This Content Should Not Be Seen Or Taken As Financial Advice Or Decision, This Is Purely For Educational Purpose Only, Please Do Your Due Diligence Before You Invest In Any Financial Asset**

Company And Product Portfolio..?

- **Pulse World is a social network that uses the metaverse to provide users with virtual communities, games, music, videos, and other social activities.**
- **It connects users, creators and brands using block chain technology, decentralized identity, and smart contracts, creating a shared economic model.**
- **Additionally, Pulse World will provide a range of services and solutions for content creators, users and brands, such as content creation and distribution tools, as well as marketing and advertising solutions to help brands engage with their prospective audiences.**

Company And Product Portfolio..?

- **HEX is a cryptocurrency that was created by Richard Heart. HEX has a number of features that make it unique, such as its staking system, which allows users to earn interest on their holdings, and its "Proof of Stake Time" protocol, which gives users an additional reward for holding HEX for a longer period of time.**
- **Richard Heart founded HEX on December 2, 2019 and distributed tokens to users who were found to be holding Bitcoin on-chain. The token price ran up 200x from December 2019 to December 2021 and became one of the most popular savings accounts in crypto.**

What Is the Metaverse..?

- While it is quite hard to define it, we will give a working definition. metaverse is simply a wide expanse of digital space where users can interact with each other in real-time and get similar experiences to what they experience in the real world, and in most cases even more.
- This definition of the metaverse highlights a crucial point - the fact that it is a wide expanse of a digital realm that can be said to be continuing the realm of the "real world".
- The only reason why we put the real world in double quotes is that it is conceptually hard to distinguish between what the metaverse is and what the "non-metaverse" is. This is where its core features come in.

WHY CHOOSE US.?

1

ADVANTAGE SOLUTIONS

With PulseChain, we provide you with the best and advanced solutions for your business deals and investments.

2

SYSTEMATIZED

At PulseChain, your investments are executed in a systematic and secure way

3

BUSINESS GROWTH

Robust, secure and long-lasting business growth comes from your every investment, made in PulseChain.

4

MARKETING EXPERT

Our team of marketing experts will guide you the best for channelizing your savings appropriately.

Vision/Mission

Our Vision

"Have the end in mind and make sure your working towards it."

Regarding our Customer Care & Grievances Cell. We start our day with prayer to God to give us strength to serve our customers/distributors and all our associates with Care, Concern and Commitment to provide truly "WORLD CLASS" services in a truly "PROFESSIONALIZE" way through our Consumer Care Department working all the time.

Our Mission

Together we work with our communities to promote health, wealth and happiness based on latest technology for positive change.

"Every successful business is backed up by a success-mantra. Our success mantra is to remain transparent and be upfront with our customers.

Our Services

01

Fast Transaction

We used the fastest transaction technology.

02

Data Privacy

We guarantee your information fully secure here.

03

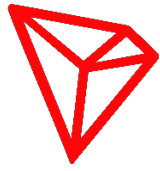

Secure and Stable

Your fund is fully secure.

04

24/7 Support

We are here for your support all the time.

Steps For Account Creation

Create your account with easy 5 steps.

01

www.pulsescripto.com

Open the website on your computer/mobile .

02

Fill the query form

If you have any query related to investment plan then fill the form and submit Our team will get back to you.

03

Create Account

After that you can sign up with your mobile number & personal details.

04

Welcome Letter

After Successfully sign up you will get your user name and password with welcome letter.

05

Ready For Invest

After successfully login the account . You can make your investment anytime.

Investment Profit

1-Daily Income @2-4%

2-Level Income 1 to 4

3-Direct Referral Income @8%

4-Free Registration

*5-Refundable Amount***

Terms & Conditions Apply: -

1-Profit will be credit everyday in your wallet.

2-User can raise withdrawal request 24/7.

3-User can withdrawal any time no minimum withdrawal requirement.

4-If found duplicate account the user account and his investment will be freeze.

5-E-Wallet Transfer Available without any deduction.

6-Working Income Get's 5X Time Limit on your total deposited amount.

7-Profit automatically transfer to your exchange wallet.

Glad we got to meet today . Please do check out our website

www.pulsescrypto.com

Afterwards and loved your take on creating high performance teams.

Do try using recommendation?

*Use that framework with your team and it will be
incredibly successful.*

*Again, it was great meeting you today, and
I hope to see you again soon.*
